KYUSHU UNIVERSITY

Research at the Yasuda Group and the Kyushu University

During my six month stay at the Kyushu University I did research at the Yasuda Lab. My topic in this lab was the synthesis of new fluorescent materials for the usage in OLEDs. The research was mainly focused on organic synthesis, with the following fabrication and analysis of the OLEDs. The group was very international and welcomed me very warmly.

We also had a Symposium, where German and some Japanese researchers gave a presentation about their research topics. It was a very exciting and nice experience!

Life at the Kyushu University and in Fukuoka

The main campus of the Kyushu university is located rather outside of Fukuoka. It is a very modern and beautiful campus, with a lot of activities to do, for example the E-Café, a gym and several sports fields. Luckily my friends and I were able to participate at the Kyushu University Basketball Club. The whole team was very welcoming and it was a lot of fun sharing the same passion with the Japanese students! In general, there was a very wide range of sports offered, where everyone can find their favourite sport

Furthermore, Fukuoka was a very lovely city to go out to. It offers a lot of entertaining activities where you can spend your days off, for example visiting teamLab, go shopping in Canal City or visit the Baseball Stadium. For me, it was one of the most enjoyable cities to live in!

Traveling in Japan

Japan has many beautiful cities to visit. I am very thankful that I had the opportunity to travel to Tokyo, Osaka, Kyoto, Okinawa, and many more. Every city has its own very special atmosphere and I enjoyed being in every single one.

We also visited the beach in Itoshima, called Palm Beach, which is very near to the Campus.

DAAD-ISAP exchange program

In conclusion I can highly recommend to participate in the DAAD-ISAP exchange programs. It allows you to study abroad and get to know different cultures and get some insights on how research is done in different countries. I am very grateful for the support of the DAAD and the opportunity to be part of the exchange program.

Special thanks to Prof. Besenius and Fr. Fehser for the organization, as well as to Prof. Yasuda for the supervision!
